

Find City

Goals: To implement a sequential and a binary search

Overview: Sometimes a zip code is known, but not the city associated with it. In this lab an application will be written that will look up what city is associated a zip code.

What to do: Complete the two search methods in `FindCity.java`. You will need `CityZip.java` and `OH_zips.txt` which can be found in the course folder.

What to submit: Show me your program when completed.
